

ECTP
European Construction Technology Platform

THEMATIC PRIORITY

Underground Construction, Cities and Building, Materials, Quality of Life

PROJECT FUNDING

No project funding

DESCRIPTION

The main mission of the European Construction Technology Platform is to develop new R&D strategy to improve the competitiveness of the construction sector and to meet societal needs and environmental challenges. One of the key challenges is reduce the use of energy, materials, and other resources in construction and in the built environment.

The principal focus areas:

- Underground construction
- Cities and building, quality of life
- Materials for the construction
- Integrated network of utilities and infrastructure
- Cultural heritage
- Processes and ICT
